

Lake Memphremagog Angler Creel Survey 2018-2020

Vermont Fish and Wildlife Department Annual Report

State: Vermont

Project No.: F-36-R-23

Grant Title: Inland Waters Fisheries and Habitat Management

Study No.: V

Study Title: Creel/Angler Surveys

Period Covered: July 1, 2020 to June 30, 2021

Dept. Filename: F36R23Study05-53

Summary

Vermont Fish and Wildlife Department (VFWD) staff conducted an open water and ice angling survey on Lake Memphremagog to investigate angler effort, catch and harvest, and angler preferences in Vermont and Quebec. This two-year angler (“creel”) survey was conducted on both the Vermont and Quebec portions of the Lake. The funding source for the Quebec portion of the survey was the international Great Lakes Fishery Commission (GLFC). GLFC funding was used to finance all Quebec operations, including both equipment acquisition and maintenance and staff salaries. GLFC also funded Vermont operations, including equipment acquisition and maintenance and salaries for creel clerk staff and VFWD Biologist and Specialist when they were conducting surveys or when maintaining the equipment. Federal Dingle-Johnson dollars were used to pay partial salary for one employee (Peter Emerson, Fish Biologist with Vermont Fish and Wildlife Department) to conduct project oversight, project coordination, data analysis, public presentations and report writing.

Date Range	12/14/2018 – 5/2/2020
Days Surveyed	539
Anglers Interviewed	5,960

Introduction

The objectives of this study were:

- To establish baseline data for the entirety of the Lake Memphremagog fishery.
- To assess angler satisfaction to regulations on Lake Memphremagog
- To monitor angler effort, catch rate and harvest rate data for comparison to previous angler surveys on Lake Memphremagog and for comparison to other lake fisheries in the region.

Methods

A roving creel survey was conducted on Lake Memphremagog in Quebec and Vermont beginning during the 2018 ice fishing season (December 2018) and continuing through the 2020 open water fishing season (September 2020). The creel survey consisted of instantaneous angler counts, angler interviews, and examination of harvested fish. In Quebec, the survey area was divided into northern and southern survey sections, and further divided into instantaneous count zones which were small enough to conduct angler counts and interviews by either boat or snowmobile in 2-hour periods. In Vermont, the survey was divided into three instantaneous count zones which were small enough to conduct angler counts and interviews within 2-hour periods, including travel time required to switch boats and trailer snowmobiles to South Bay. A map of the survey area including instantaneous count zones is shown in Figure 1.

Instantaneous counts occurred at randomly selected intervals (am or pm) and were stratified into weekend or weekday groupings. There were four counts per week: Saturday and Sunday, and two randomly selected weekdays. Count times were assigned randomly, and angler interviews typically occurred between count times. Holidays were included as weekend days, and during those weeks with weekday holidays, the survey was adjusted to include only one weekday.

The start and end dates of the survey in Quebec were determined by the opening and closing dates of the seasons, which was from December 20 to March 31 for the ice season and from the 4th Saturday in April to October 31st for the open water season. Vermont survey dates were determined by the presence of safe ice during the ice season, which was generally mid-December through early April, and when weather conditions were safe during the open water season, which was generally mid-April through October. Survey summary including season, location and days conducted is shown in Table 1.

Surveys were conducted in a randomly-selected direction (counterclockwise or clockwise) beginning at the designated access area during ice surveys and beginning at the boat mooring location during open water surveys.

Effort was estimated from instantaneous counts as follows:

$$E = \text{effort (angler-hours)}$$

$$c_1 = \text{mean \# of anglers counted during instantaneous weekend counts}$$

$$c_2 = \text{mean \# of anglers counted during instantaneous weekday counts}$$

$$\text{var()} = \text{variance}$$

$$h_1 = \text{hours in the day}$$

$$d_1 = \text{\# of weekend days in survey period}$$

$$d_2 = \text{\# of weekdays in survey period}$$

$$E = c_1 \cdot h_1 \cdot d_1 + c_2 \cdot h_1 \cdot d_2$$

$$\text{var}(E) = \text{var}(c_1) \cdot h_1^2 \cdot d_1^2 + \text{var}(c_2) \cdot h_2^2 \cdot d_2^2$$

Catch and harvest rates were estimated by averaging the catch and harvest rate of each angler party (Pollock et al. 1994). The equations used are as follows:

n = # of party interviews

r_j = catch or harvest rate (fish per angler-hour), party interview j

R = average catch or harvest rate (fish per angler-hour), all interviews

H = total catch or harvest

$\text{var}(\cdot)$ = variance

$$R = \frac{\sum_{j=1}^n r_j}{n}$$

$$\text{var}(R) = \frac{\sum_{j=1}^n (r_j - \bar{r})^2}{(n - 1)}$$

$$H = ER$$

$$\text{var}(H) = E^2 \text{var}(R) + R^2 \text{var}(E) - \text{var}(R)\text{var}(E)$$

Data sheets used for angler interviews can be found in Appendix II.

Results

Surveys were conducted on 539 days during the 2-year period, with the number of days in each season staying approximately consistent between years. Quebec surveys accounted for 61% of the survey days conducted. (Table 1).

Angler preference

Figures 2 through 9 are results of interviews of ice anglers and open season anglers, divided by Quebec and Vermont anglers. Quebec regulations currently allow a total of 30 salmonids to be harvested daily (Table 2), compared to only 2 salmonids in Vermont. While Vermont surveys indicate that current Vermont creel limits match angler preferences, Quebec survey results indicate that of current Quebec regulations, only the Rainbow Trout creel limit does not match angler preferences.

Species preference

Regarding species preference, Quebec anglers favor salmonid species during open water seasons and perch species during ice seasons, whereas Vermont anglers favor salmonid species during ice season and bass species during open water seasons (Figures 8, 9). Anglers' reasons to fish on Lake Memphremagog include proximity to home and scenery (Table 3). Fisheries management considerations include providing quality salmonid, perch, and bass fisheries, as well

as diversity of species available to anglers, and quantity of trophy size fish. Some of the concerns that prevented anglers from fishing Lake Memphremagog included pressure, quantity of fish, for Quebec anglers and small number of Vermont anglers cited distance and weather conditions (Table 4). Management considerations include the increasing pressure on the lake (too many anglers/boaters) and “no concerns” with most Vermont anglers.

Catch and Harvest Rates

Tables 5 through 20 summarize the catch and harvest rates of common species in Lake Memphremagog, both Vermont and Quebec main lake and Vermont South Bay. Of note is the high harvest rate of Lake Trout, landlocked Atlantic Salmon, Rainbow Trout, Yellow Perch, and White Perch. Management considerations include the high catch rate of salmon in Quebec, the Vermont harvest of Lake Trout in open water and ice seasons (totaling 1,634 trout over all four seasons) versus Quebec harvest of Lake Trout in open water only seasons (2,722 trout over two open water seasons), the harvest of landlocked Atlantic Salmon in Vermont (totaling 149 salmon) versus the harvest in Quebec (totaling 2,828 salmon), Vermont Rainbow Trout harvest (554) versus the Quebec Rainbow Trout harvest (1,671), and Yellow Perch harvest in Vermont (123,094 perch) versus Quebec Yellow Perch Harvest (110,173 perch).

Fish measurement and summaries

Tables 21 through 23 summarize average lengths of common species measured by creel clerks during the survey. Figures 10 through 14 are length frequency plots of common species measured by creel clerks during the survey.

Appendices 2 through 17 are tables of all species catch and harvest rate estimates during the survey.

Prepared by:

Peter Emerson, Fisheries Biologist

Jud Kratzer, Fisheries Biologist

Date: July 14, 2021

This project was made possible by fishing license sales and matching Dingell-Johnson/Wallop-Breaux funds, available through the Federal Aid in Sport Fish Restoration Act.

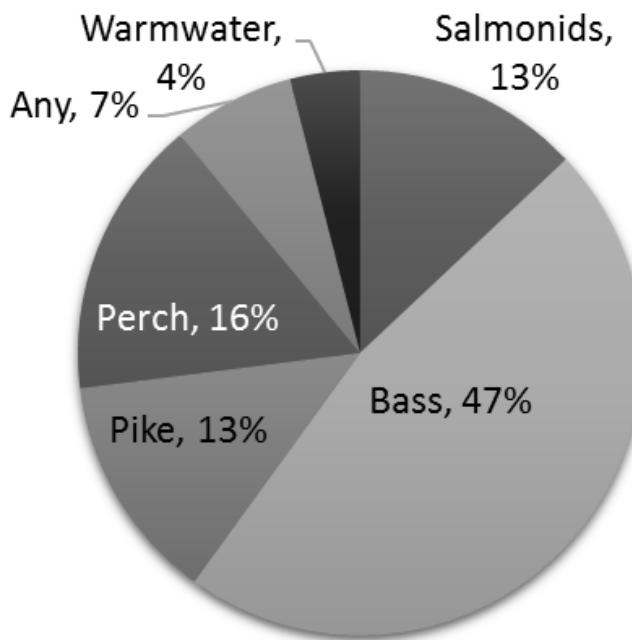

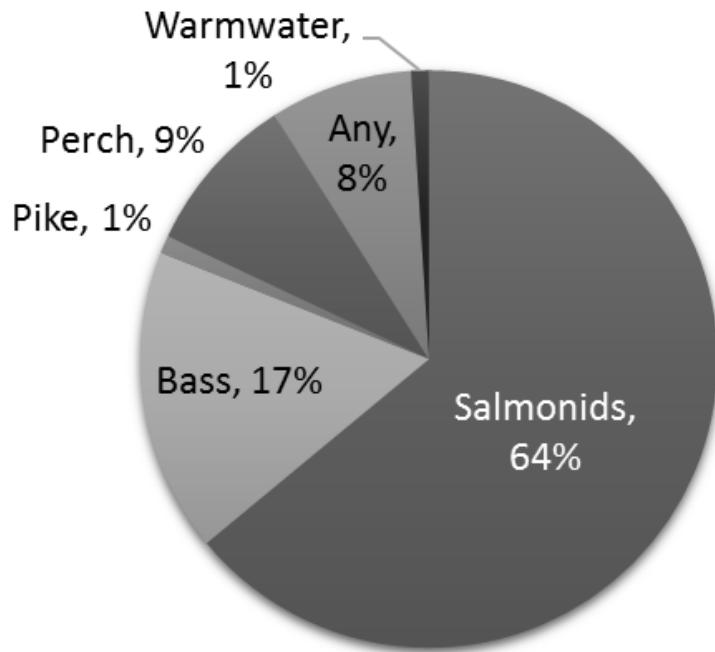

Figure 8. Open Water Season angler species target preference in Quebec (top) and Vermont (bottom). Species are Salmonids, Warmwater species, Bass, Pike, Yellow Perch (YLP), White Perch (WTP), Lake Trout (LKT), Rainbow Trout (RBT), Brown Trout (BNT), Landlocked Atlantic Salmon (LLS) and Any.

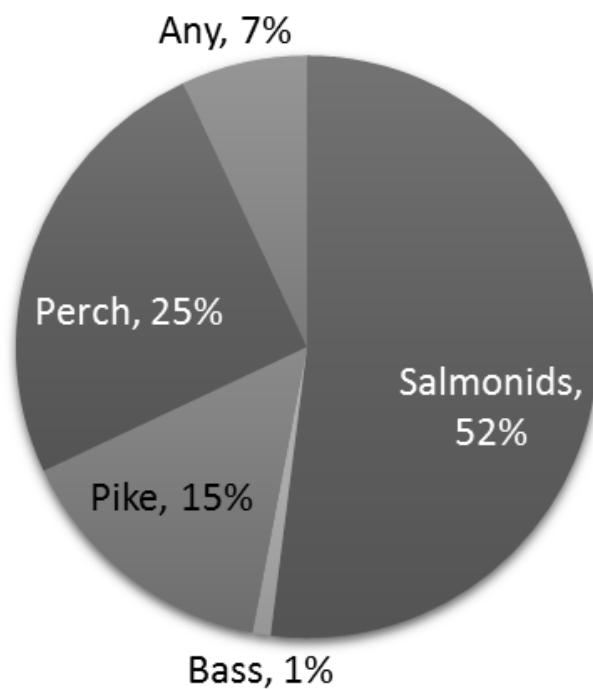

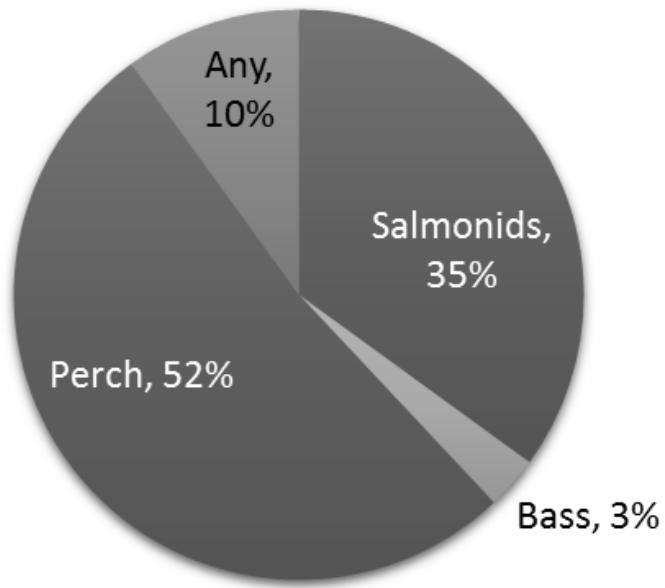

Figure 9. Ice Season angler species target preference in Quebec (top) and Vermont (bottom). Species are Salmonids, Bass, Pike, Yellow Perch (YLP), White Perch (WTP), Lake Trout (LKT), Rainbow Trout (RBT), Landlocked Atlantic Salmon (LLS) and Any.

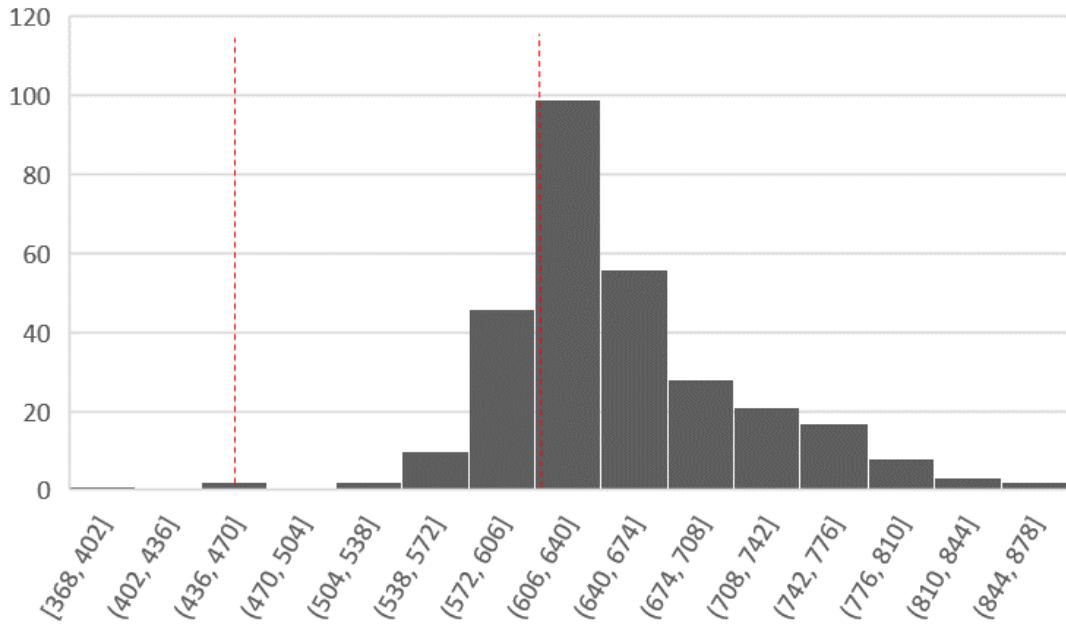

Figure 10. Length frequency of Lake Trout captured during all seasons in all areas of Lake Memphremagog International survey, December 2018 through November 2020. X-axis is the bin length in millimeters, Y-axis is the number of fish as measured by clerk in each bin size. Dotted red lines are the legal harvest length limit, 460 mm (18") in Vermont and 600 mm (24") in Quebec. Sample size is 295 Lake Trout.

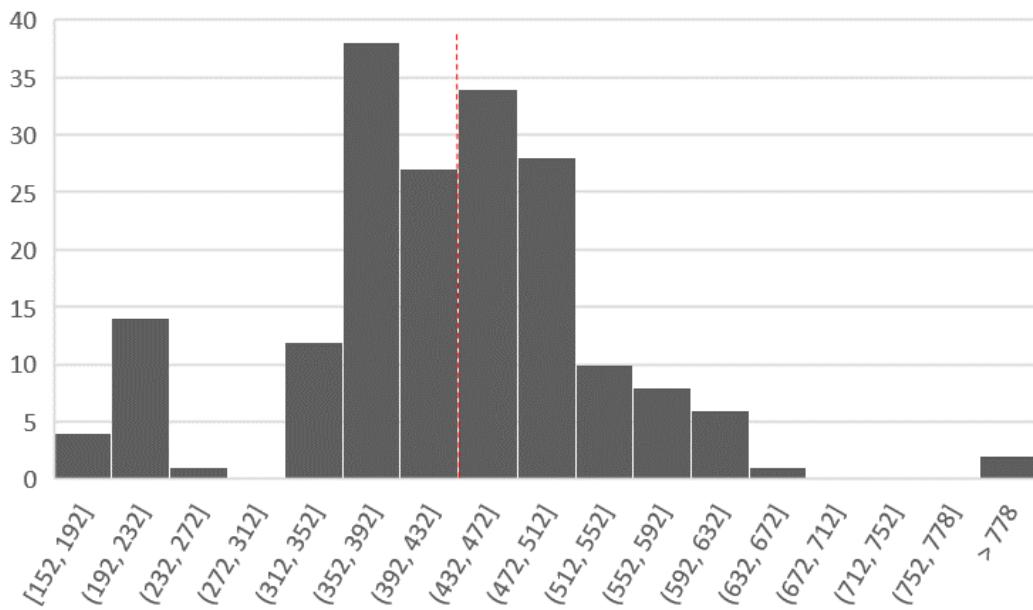

Figure 11. Length frequency of Landlocked Atlantic Salmon captured during all seasons in all areas of Lake Memphremagog International survey, December 2018 through November 2020. X-axis is the bin length in millimeters, Y-axis is the number of fish as measured by clerk in each bin size. Dotted red line is the legal harvest length limit, 420 mm (~17"). Sample size is 185 salmon.

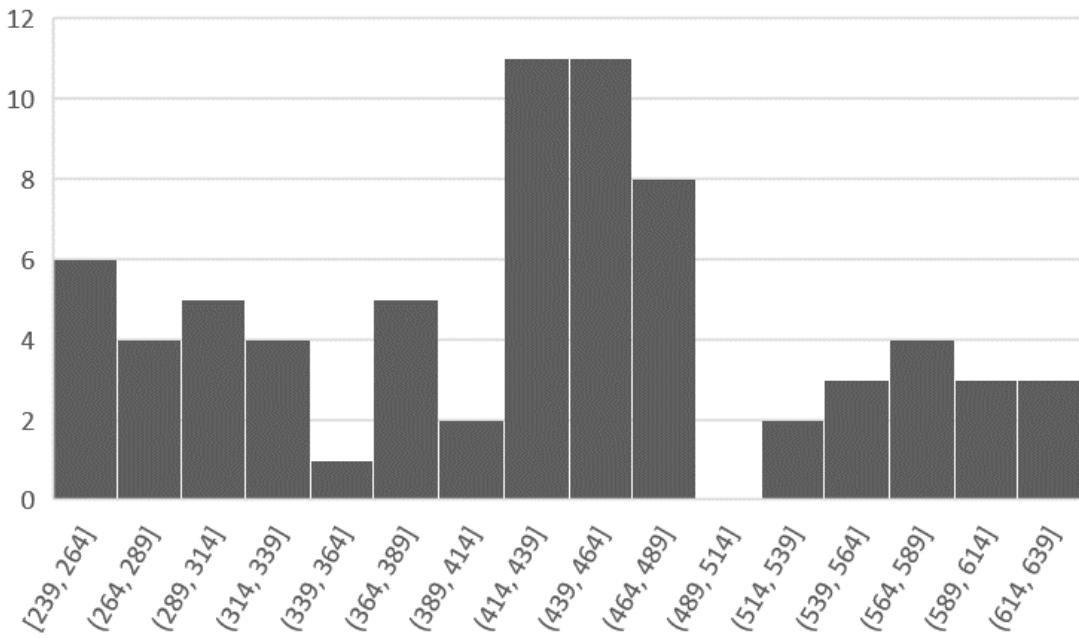

Figure 12. Length frequency of Rainbow Trout captured during all seasons in all areas of Lake Memphremagog International survey, December 2018 through November 2020. X-axis is the bin length in millimeters, Y-axis is the number of fish as measured by clerk in each bin size. Sample size is 72 Rainbow Trout.

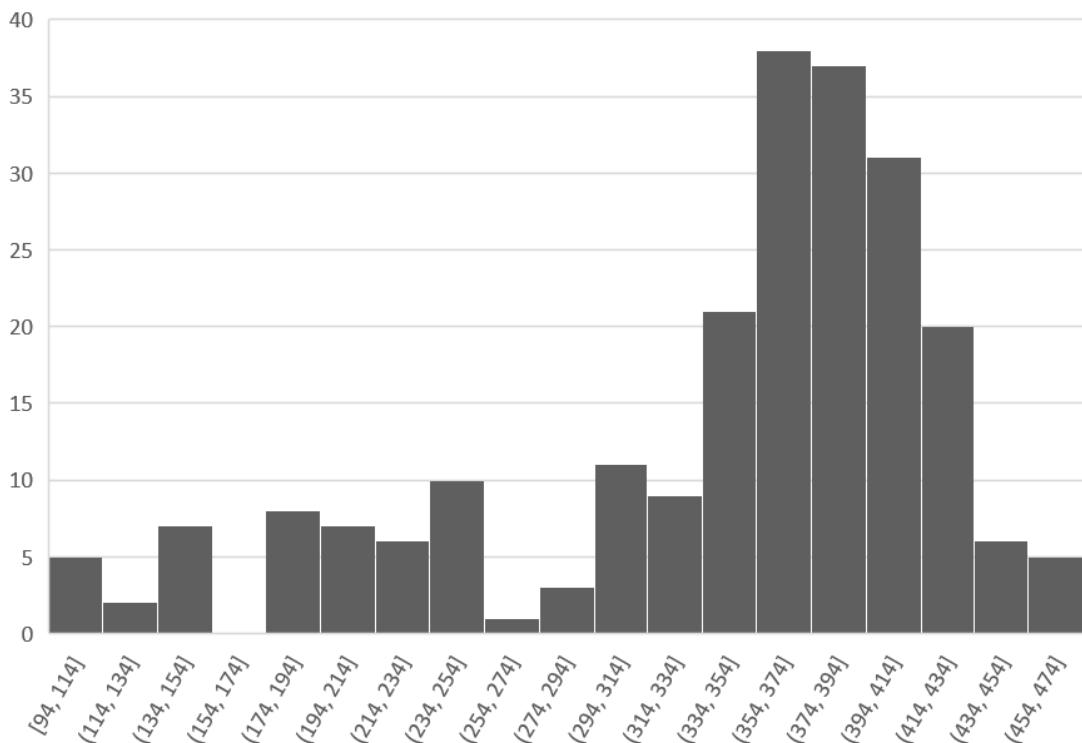

Figure 13. Length frequency of Smallmouth Bass captured during all seasons in all areas of Lake Memphremagog International survey, December 2018 through November 2020. X-axis is the bin length in millimeters, Y-axis is the number of fish as measured by clerk in each bin size. Sample size is 222 Smallmouth Bass.

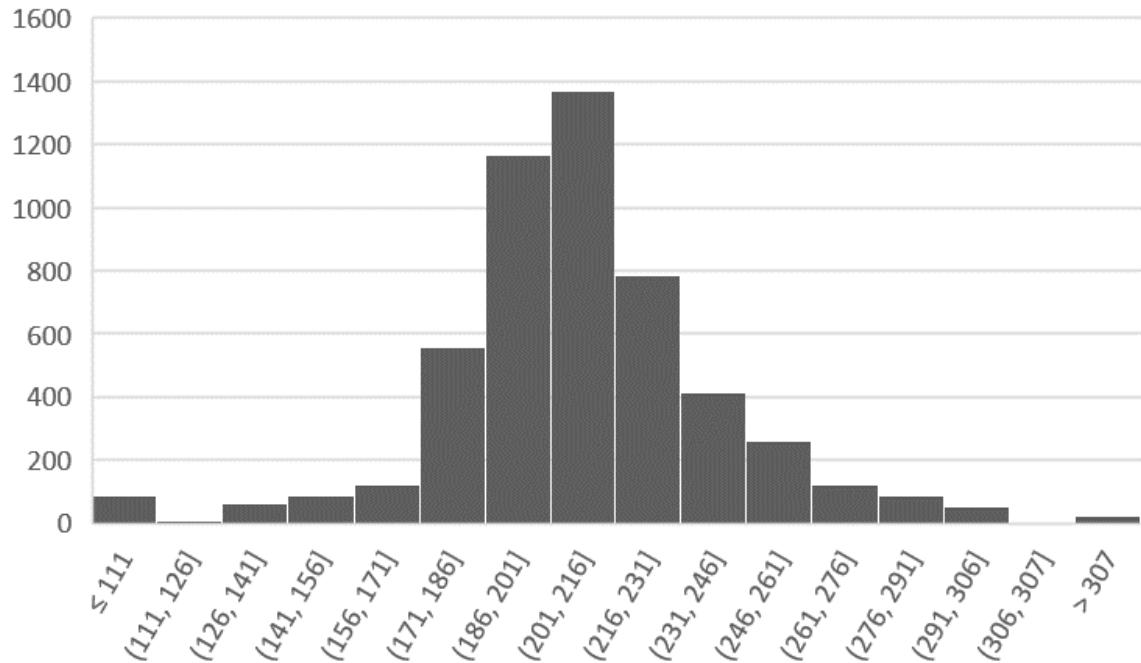

Figure 14. Length frequency of Yellow Perch captured during all seasons in all areas of Lake Memphremagog International survey, December 2018 through November 2020. X-axis is the bin length in millimeters, Y-axis is the number of fish as measured by clerk in each bin size. Sample size is 5,192 Yellow Perch

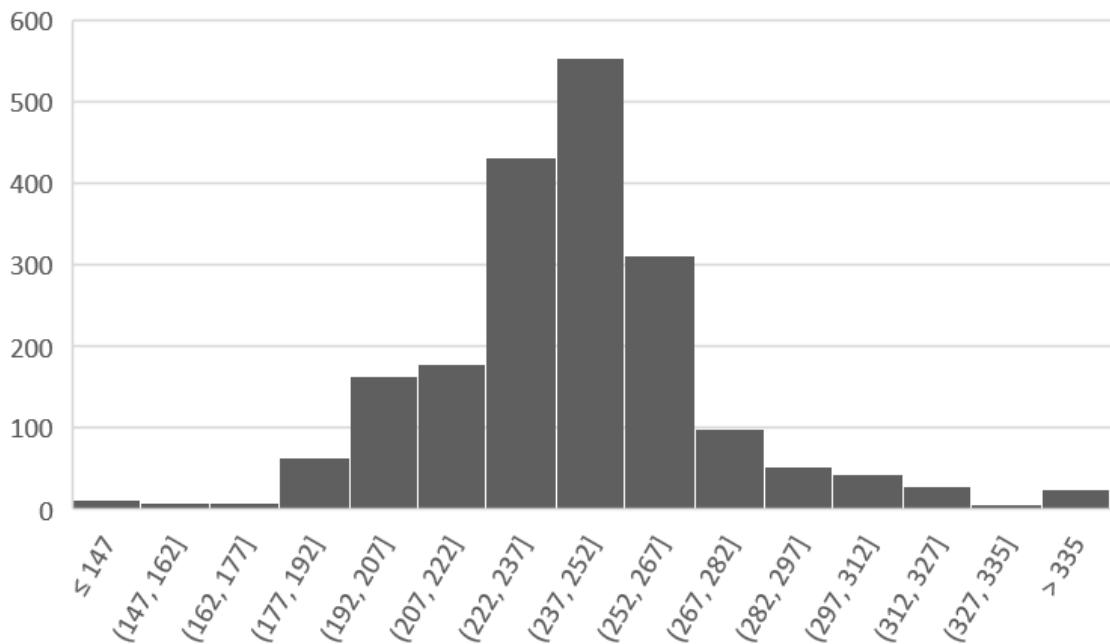

Figure 15 Length frequency of White Perch captured during all seasons in all areas of Lake Memphremagog International survey, December 2018 through November 2020. X-axis is the bin length in millimeters, Y-axis is the number of fish as measured by clerk in each bin size. Sample size is 1,982 White Perch.

Table 1. Summary of angler survey dates and number of days conducted.

Location	Season	Start Date	End Date	Weekend Days Surveyed	Weekday Days Surveyed	Angler Interviews
Quebec	Ice 2018-19	12/20/2018	3/31/2019	30	25	910
Vermont	Ice 2018-19	12/14/2018	4/6/2019	28	22	332

Vermont	Ice 2019-20	12/8/2019	3/12/2020	27	20	214
Quebec	Open 2020	5/2/2020	10/31/2020	57	47	1814
Vermont	Open 2020	4/25/20	9/30/2020	31	25	194

Table 2. Summary of Quebec and Vermont harvest regulations for salmonid species during the survey period. LKT = Lake Trout, LLS = Landlocked Atlantic Salmon, RBT = Rainbow Trout, BNT = Brown Trout, BKT = Brook Trout. Asterisk (*) indicates that Quebec does not allow harvest of LKT in ice season. Total column indicates that Vermont daily salmonid limit is restricted to 2 salmonids cumulative, which can be a combination of species or 2 of any one species, whereas Quebec daily salmonid limit is 30 total salmonids.

State or Province	Daily LKT (min length)	Daily LLS (min length)	Daily RBT (min length)	Daily BNT (min length)	Daily BKT (min length)	Total
Quebec	2 (>60 cm)*	3 (>42 cm)	10 (NL)	5 (NL)	10 (NL)	30
Vermont	2 (>46 cm)	2 (>42 cm)	2 (>25 cm)	2 (>25 cm)	2 (NL)	2

Table 3. Angler response to interview question: “What are the primary reasons you LIKE to fish Lake Memphremagog”. Reasons were (left to right): Close to home, Near Family or friends, Always have fished here, Quantity of fish, To Catch Trophy-size fish, Quantity of Species, Quality of Salmonid fishery, Quality of Perch fishery, Quality of Bass fishery, Scenery, For Food.

State or Prov.	Season	Close	Family	Always	Quantity	Trophy	Species	Quality Salm.	Quality Perch	Quality Bass	Scenery	Food
Quebec	Open	30%	3%	7%	8%	3%	9%	11%	1%	2%	23%	2%
Quebec	Ice	19%	6%	8%	10%	2%	21%	18%	12%	-	4%	-

APPENDIX I

Legend to Appendix 1b

Section – name of section surveyed, Quebec North, Quebec South, Vermont Lake, South Bay

Anglers in this party – number of anglers interviewed

Rods trolling – number of fishing lines used by trolling

Rods casting – number of fishing lines used by casting

SPP sought – species sought; salmonids (Brown Trout, Lake Trout, Rainbow Trout, Salmon), sunfish (Pumpkinseed, Rock Bass), Rainbow Smelt, White Perch, Yellow Perch, Bass (Largemouth, Smallmouth), Northern Pike/Pickerel, or No Preference

Residence – hometown of angler

Start Time – angler fishing start time

Interview Time – time that clerk interviewed angler

Breaks – time that angler took off from fishing between Start Time and Interview Time

Done – Yes/No whether angler has finished fishing

N – fish data; number of fish of each species caught

Kept? – number of fish angler harvested

Fin Clips – clerk records any fin clips identifying strain or stocking year of species caught

Stomach – clerk records any stomach contents inside of harvested fish

Appendix 1a

2019 Memphremagog OpenWater Fishing Opinion Survey Number of anglers: _____

- 1) Have you completed this survey before?
 - a. Yes No
 - b. If yes, please stop here.

× With Fishing Guide?
- 2) Approximately how many days do you fish Lake Memphremagog in a typical open water season? _____
- 3) What species do you most prefer to fish for on Lake Memphremagog in a typical open water season?

× Salmonids lake trout rainbow trout salmon Brown trout sunfish bass pike w perch
 perch smelt Warm water no preference × _____
- 4) Quebec anglers can harvest 10 rainbow trout of any length, Vermont anglers can harvest 2 rainbow trout great than 10" (25 cm). Do you believe a 10 rainbow trout harvest limit per day is:

× Just right Too low Too high Don't know No opinion
- 5) Quebec anglers can harvest 3 landlocked salmon 42 cm (16.5") or more in length, VT anglers can harvest 2 salmon greater than 17" (43 cm). How many salmon per day do you think should be legal to harvest?

more than 3 3 2 1 0 No opinion
- 6) Quebec anglers can harvest 2 lake trout 60 cm (24") or more in length, Vermont anglers can harvest 2 lake trout 18" (46 cm) or more in length. How many lake trout do you think should be legal to harvest per day?

× more than 2 2 1 0 Don't know No opinion
- 7) What are the primary reason(s) you like to fish Lake Memphremagog (during the open water season)?

Close to home Family & friends Always have Usually catch a lot of fish Trophy fish
 Lots of fish species Quality trout and salmon Lots of fish Quality perch fishing
 Quality of the meat Scenery Quality bass Other _____
- 8) What are the primary reason(s) you don't like to fish Lake Memphremagog (during the open water season)?

× Too far from home Too much fishing pressure Too many people Lack of trophy-sized fish
 Uncertain weather conditions Not enough fish Too expensive Not enough access
× Other _____
- 9) Which other waterbodies have you fished this season? _____

How many times have you fished there? _____
- 10) Comments:

Appendix 1b

2019-20 Memphremagog Open Water Angler Survey

Clerks: _____

Date:

Section: North QC South QC South Bay North VT

of anglers in this party: _____ # of rods trolling: _____ # of rods casting: _____

SPP sought: Salmonid (LKT/LLS/RBT/BNT) Sunfish Smelt W Perch Y Perch Bass Pike/Pickerel
Warmwater No Pref

Residence (town): _____

Start time: _____ Interview time: _____ Breaks(min): _____ Done?: Y; N

Legend to Appendices 2 through 17

Species sought:

All = includes all angler reports from survey area during survey period

Any = reports from anglers with no preference to species targeted

Perch/Warm = reports from anglers seeking warmwater species including Perch

Pike/Pick. = reports from anglers seeking Pike or Pickerel

Salmonids = reports from anglers seeking Trout species and Salmon

Warm = reports from anglers seeking any warmwater species

Species caught:

BRB = Brown Bullhead

BNT = Brown Trout

CHP = Chain Pickerel

LKT = Lake Trout

LKT >600mm = Quebec legal length Lake Trout

LLS = Landlocked Atlantic Salmon

LLS >420mm = Quebec legal length Landlocked Salmon

LMB = Largemouth Bass

NRP = Northern Pike

PMS = Pumpkinseed

RBT = Rainbow Trout

RKB = Rock Bass

RSM = Rainbow Smelt

SMB = Smallmouth Bass

SUN = Sunfish species; Rock Bass and Pumpkinseed combined

WTP = White Perch

YLP = Yellow Perch

Column Headers:

Ang. Rec. = number of anglers interviewed for the Species Sought category

Counts = number of survey days in the survey period

Effort = number of hours of angling for the survey period (differs when legal harvest season is in effect)

Catch Rate = number of fish caught per angler hour

Catch = extrapolated number of fish estimated by multiplying Catch Rate by the Effort

Catch Rate Leg. Len. = number of legal length fish caught per angler hour (only species with regulated harvest length included)

Harvest Rate = number of fish harvested per angler hour
